TRI-MONTHLY MICROCLIMATIC SUMMARY

Introduction

The microclimatic data summarized in this series of reports were collected by the US Army Tropic Test Center under the project Environmental Data Base for Regional Studies in the Humid Tropics. The project was sponsored by the Advanced Research Projects Agency of the Department of Defense and by the Army Research Office, Office of the Chief of Research and Development. It was an investigation of microclimatic, air chemistry, vegetation, soils, microbiological, and macrofaunal conditions at selected sites in the principal tropical environments of the Panama Canal Zone. The objective of the project was to assemble quantitative environmental data for RDT&E purposes.

This summarization begins a second series of publications which reflect the reduction in the data collection effort. The data summarized in this series were collected at the Albrook Forest site only as in contrast to data from several sites presented in the preceding series. The publications will be bound in increments of three months to each issue.

Site. Data summarized in this report were collected at the Albrook Forest site. Figure 1 shows the site locations within the Isthmus of Panama. The geographic coordinates of the site are: 09° 01'N, 79° 33'W, elevation 30 meters above sea level.

The station was located within a semi-evergreen forest in a region for which the mean annual precipitation is close to 80 inches, and where a well expressed dry season is typical. It had a 46-meter walk-up tower and an air-conditioned building to house the remote recording equipment and the observers. Both tower and station were dismantled in September 1969.

Instrumentation. A wide range of climatic elements were measured. Types of observations and frequencies are shown on Figure 4. Sensing equipment were mounted at several levels on the tower to provide measurements through the vertical profile. Additional instruments were emplaced in the immediate vicinity on or near the ground. Figures 2 and 3 show the instrument arrays. Additional temperature sensors were placed at new levels on the tower.

Beginning with this reporting period new instrumentation has replaced much of the old. Hygrothermographs were replaced by resistance type temperature sensors; new wind sensors, with a threshold speed of 0.7 mph were installed; tipping bucket raingages and radiation sensors were added.

Data Reduction and Storage. Much of the data were obtained by automatic means and were stored in digital form directly on paper punch tape each 15 minutes. The remaining data were read by observers on remote dials or stripcharts at 1/2, 1, or 6 hourly intervals and were entered on

standard punch cards. The data have been transferred from punched tape and cards onto magnetic discs. The tables of this summary are copies of computer printouts from the discs.

The maxima and minima presented in these summaries are the highest and lowest quarterly or half-hourly values, as applicable, and are tabulated under the full hour heading following the time of the measurement, e.g., if the extreme value was measured at 0115, the entry is made under the heading 0200. The exception to this is the precipitation measurements made with the Clear-Vu rain gage and the evaporation measurements which are made at six-hourly intervals.

The discs will ultimately be deposited with Natick Laboratories, Natick, Mass.

Table 1. Summary of the results of the analysis of variance for the effect of the treatment on the yield of the different components of the plant.

Source of variation	Degrees of freedom									
	1	2	3	4	5	6	7	8	9	10
Treatment	1	1	1	1	1	1	1	1	1	1
Replication	1	1	1	1	1	1	1	1	1	1
Block	1	1	1	1	1	1	1	1	1	1
Error	1	1	1	1	1	1	1	1	1	1
Total	1	1	1	1	1	1	1	1	1	1

Table 2. Summary of the results of the analysis of variance for the effect of the treatment on the yield of the different components of the plant.

Source of variation	Degrees of freedom									
	1	2	3	4	5	6	7	8	9	10
Treatment	1	1	1	1	1	1	1	1	1	1
Replication	1	1	1	1	1	1	1	1	1	1
Block	1	1	1	1	1	1	1	1	1	1
Error	1	1	1	1	1	1	1	1	1	1
Total	1	1	1	1	1	1	1	1	1	1

Table 3. Summary of the results of the analysis of variance for the effect of the treatment on the yield of the different components of the plant.

Source of variation	Degrees of freedom									
	1	2	3	4	5	6	7	8	9	10
Treatment	1	1	1	1	1	1	1	1	1	1
Replication	1	1	1	1	1	1	1	1	1	1
Block	1	1	1	1	1	1	1	1	1	1
Error	1	1	1	1	1	1	1	1	1	1
Total	1	1	1	1	1	1	1	1	1	1

Table 4. Summary of the results of the analysis of variance for the effect of the treatment on the yield of the different components of the plant.

Source of variation	Degrees of freedom									
	1	2	3	4	5	6	7	8	9	10
Treatment	1	1	1	1	1	1	1	1	1	1
Replication	1	1	1	1	1	1	1	1	1	1
Block	1	1	1	1	1	1	1	1	1	1
Error	1	1	1	1	1	1	1	1	1	1
Total	1	1	1	1	1	1	1	1	1	1

A 10x10 grid of 100 small, dark, irregular shapes, possibly representing a microscopic view of a material or a collection of small objects. The shapes are mostly black or dark grey, with some lighter, greyish areas, and they vary in size and orientation. They are arranged in a regular grid pattern, with each shape occupying a small square cell. The overall appearance is that of a dense, textured surface or a collection of small, dark particles.

13. ABSTRACT This report contains detailed microclimatic data for March-May 1968 from a specific site in the Panama Canal Zone. The data are presented in tabular form, summarized for hourly and/or daily observations from surface to 46-meter levels. Elements listed are: temperature, precipitation, wind speed and direction, relative humidity, evaporation, radiation, vapor pressure, and saturation deficit.
